

Recombinant and Natural Proteins

The Most Reputable Manufacturer

Guaranteed Performance—Always

We back up our performance specifications with relevant bioassay data and every lot is tested before release and again after bottling to ensure consistent performance.

Trusted Purity and Low Endotoxin for the Best Results

Our proteins are highly pure and, at minimum, must meet the lowest endotoxin specification (<0.1 EU/μg) on the market.

Largest Selection

We offer over 4,800 recombinant and natural proteins from over 22 species. We also offer Animal-Free™ and GMP-grade proteins.

Manufactured by Scientists, for Scientists

Our team of over 100 protein scientists brings the most experience and know-how in the industry to the development and production of our proteins.

Superior Bioactivity

Relative Bioactivity of R&D Systems Proteins v. Competitor Proteins

Custom Services

When your research demands unique solutions, partner with expert scientists at Bio-Techne. We offer cloning and expression services as well as *in vitro* modifications including biotinylation, fluorescent labeling, PEGylation, and enzymatic processing. Along with a project manager as a point of contact, expect our scientists to deliver products to meet your specifications and needs.

Most Referenced

A literature survey of 1,125 manuscripts containing 15,180 product citations from 16 different journals related to cancer, immunology, neuroscience, and stem cells was conducted to determine the number of citations referencing the use of R&D Systems proteins compared to the number referencing proteins manufactured by other companies. 1,586 total protein citations were identified in the survey, 29% of these cited the use of R&D Systems proteins. The percentage of citations attributed to eight other major protein manufacturers is also shown

(clockwise from R&D Systems, red-green sections). The final section in the pie chart (21%, light purple section) includes 333 citations referencing products from 142 different companies. All companies listed under this category had less than 2% of the total number of citations.
