**Hypoxia**  
 Hypoxia induces HIF-1 expression and consequent release of pro-angiogenic factors, e.g VEG, FGF, EGF

**Proteolytic degradation**  
 Hypoxia also upregulates protease expression leading to basement membrane degradation and pericyte detachment

**Tip cell migration**  
 Specialized endothelial cells - 'tip cells' - migrate along angiogenic factor gradient

**Tube formation**  
 Endothelial cells proliferate and migrate, leading to tube formation

**Tumor vascularization**  
 Blood supply stimulates further tumor growth
